

MEMBER 2: FRONTEND & VISUALS

Focus: View Layer (MVC), Data Visualization, Responsive UI, and Legacy Tech Integration.

Primary Responsibilities

- **The "Locker Room" UI:** Build the team-specific branded dashboards. Ensure they adapt colors based on the user's team.
- **D3.js Data Visualization:** Create the mandatory charts (Pie chart for team stats, Bar chart for post engagement).
- **Legacy Integration (Req #25):** Ensure all data fetching is routed through the `api.js` service using jQuery/Ajax.
- **Responsive CSS3 (Req #57):** Apply professional styling. Must manually document 5 properties (e.g., `linear-gradient`, `transition`, `box-shadow`, `border-radius`, `flex-direction`).
- **Real-time Chat UI:** Implement the `socket.io-client` side to display live messages as they arrive from the backend.

Frontend Consumption Requirements

Member 2 must build components to handle the following JSON structure from the API:

```
// Group / Locker Room Object
{
  "_id": "string",
  "name": "Lakers Locker Room",
  "manager": "user_id_here",
  "members": ["id_1", "id_2"],
  "pendingRequests": ["id_99"], // Display only for managers!
  "isPrivate": true
}

// Chat Message Object (WebSockets)
{
  "sender": "string",
  "text": "string",
  "team": "string",
  "timestamp": "ISO_Date_String"
}
```

Critical: Components must use the `done()` and `fail()` pattern from jQuery Ajax!
